PROFESSIONAL SUMMARY

AI Engineer specializing in Generative AI, LLM applications, and AI agent development, currently building production-grade solutions at the National Centre of Artificial Intelligence (NCAI), UET Lahore. Hands-on experience designing RAG pipelines, multi-turn conversational agents, and NLP systems using LangChain, LangGraph, Hugging Face Transformers, and vector databases (FAISS/ChromaDB). Complements AI development with DevOps practice — Docker, CI/CD, and cloud deployment — to ship reliable, real-world AI products end to end. Strong foundation in Python, model fine-tuning, and API-based system integration, with a research-oriented mindset and a track record of independent, self-driven project delivery.

CORE SPECIALIZATION

WORK EXPERIENCE

Generative AI Engineer — National Centre of Artificial Intelligence (NCAI), UET Lahore

May 2026 – Present · Lahore

- Develop and deploy Generative AI solutions for real-world applications, including intelligent chatbots and AI assistants built on LLMs.
- Implement RAG architectures with vector database integration for accurate, context-grounded responses.
- Conduct model evaluation, testing, and performance optimization for production AI systems.

DevOps Engineer — Dafi Labs

[add your details](#)

Jul 2026 – Present · Lahore

- Support CI/CD pipeline design and automation (GitHub Actions/Jenkins) to streamline build, test, and deployment workflows.
- Containerize and deploy applications using Docker, improving environment consistency across development and production.

Full Stack AI Engineer — Dev Weekends

[add your details](#)

May 2026 – Present · Lahore

- Build end-to-end AI-powered features spanning backend APIs, model integration, and frontend interfaces.

Artificial Intelligence Engineer (Freelance) — Freelancer.com

[add your details](#)

May 2023 – Present · Remote

- Deliver custom AI/ML solutions for international clients, spanning chatbot development, NLP, and data-driven applications.

Data Entry Operator — Han Ting Guo Ji Jiu Dian

Aug 2024 – Feb 2026 · Preah Sihanouk, Cambodia

- Maintained structured guest and reservation data, ensuring accuracy and integrity across daily operational reports.
- Assisted management with data-driven reporting and handled confidential records with strict attention to detail.

Sales Manager — Talha Book Depot

Jun 2024 – Aug 2024 · Zafarwal, Pakistan

- Managed end-to-end sales operations, billing, and inventory tracking; prepared financial reports using MS Excel.

HR Assistant AI Agent

LangGraph agent (Llama 3.1 8B via OpenRouter) answering HR policy questions, looking up employee records, and calculating leave balances via a ReAct reasoning loop with multi-turn memory and tool calling.

Stack: LangGraph, Llama 3.1, Streamlit, Python

NADRA Assistant — Urdu RAG Chatbot

Urdu-language RAG system answering user queries from uploaded PDFs using semantic retrieval, with OCR fallback, multilingual embeddings, reranking, and hallucination scoring.

Stack: RAG, Multilingual Embeddings, OCR, Gradio

Fresh-Fetch AI Agent

Real-time RAG agent that bypasses LLM knowledge cutoffs by scraping live web data via DuckDuckGo and synthesizing grounded, up-to-date answers from raw sources.

Stack: RAG, Web Retrieval, Python, LLM

AI Medical Assistant

Transformer-based medical chatbot offering symptom understanding, health guidance, and contextual conversation with custom system prompts and conversational memory.

Stack: Hugging Face, Gradio, NLP

RAG-Based Document Q&A Chatbot

Retrieval-Augmented Generation chatbot enabling users to upload PDFs and receive accurate, context-grounded answers via semantic search over embeddings.

Stack: LangChain, FAISS/ChromaDB, Python

BERT-Based Text Classification

Fine-tuned pretrained BERT transformer models on custom datasets for text classification and sentiment analysis with improved contextual understanding.

Stack: BERT, PyTorch, Transformers

ADDITIONAL PROJECTS

Sentiment Analysis — Amazon & Alexa

Reviews: NLP pipeline classifying product reviews with deep learning models. Python, NLTK, TensorFlow

Diabetes Prediction System: Classification model for diabetes risk from medical datasets. Scikit-learn, Pandas

House Price Prediction Model: Regression model with EDA and feature selection. Scikit-learn, NumPy

T5 Transformer NLP Project: Fine-tuned sequence-to-sequence model for summarization and Q&A. T5, Hugging Face

RNN-Based Deep Learning: LSTM/GRU

architectures for sequential text prediction. TensorFlow, Keras

CI/CD Pipeline Automation: Automated build, test, and deployment workflows. GitHub Actions, Jenkins, Docker

Dockerized AI App Deployment: Containerized ML apps for scalable, consistent deployment. Docker, Docker Compose

Cloud-Based AI Deployment: Deployed AI apps on cloud infrastructure with production-ready pipelines. AWS/Azure/GCP, Docker
